

Prepare a Cisco Device for SCP

1. If using GNS3 **add a PCMCIA slot** and format it using the CLI
2. **Create a user with privilege level 15.** It's not possible to run the enable command through scp

```
(config)#username u1 priv 15 secret cisco
```

3. **SSH server must configured and running on the device**

```
4. (config)#ip scp server enable
```

5. **Configure AAA**

```
(config)#aaa new-model
```

```
(config)#aaa authentication login default local
```

```
(config)#aaa authorization exec default local none
```
